

READ THE TEXT

Help us save our planet!

A Global warming is one of the biggest problems in the world today. We burn fossil fuels to produce energy and this creates the greenhouse gases which cause global warming. Global warming causes the temperature to increase. Sea levels are also getting higher and extreme weather is more common, too. If we don't make changes soon, life on earth will never be the same again. But what can we do about it?

B Saving electricity can help reduce the problem. If we always turn off lights, computers and other electronics when we're not using them, we will use less electricity and we will pollute less as well.

C We can also think about transport. Most cars use petrol, which causes pollution. Next time you go somewhere by car, think about this: is it possible to walk or cycle instead? Walking and cycling are more eco-friendly and they also cost less. If everyone makes small changes to how they live, we may be able to slow down global warming.

Writing

Choose another environmental problem

PARAGRAPH 1 :What is the problem? What is the cause? What will happen if we don't do something about it?

PARAGRAPH 2: Describe one way to help reduce the problem and how it will help.

PARAGRAPH 3: Describe another way to help reduce the problem and how it will help. Write a little conclusion at the end of this paragraph.

REMEMBER to use *too/ also/ as well
